

Water Conservation Tip

Indoor

Check for leaks in your toilets. Simply place some food coloring into the water in the tank. If the color appears in the bowl after ten minutes, it means you have a leak. Typically, the leak is a result of the water level being set too high or the flapper needs to be replaced. Leaks can cause significant water waste in an otherwise conserving household, so get them fixed!

Water Conservation Tip

Indoor

If your showerhead can fill a one-gallon bucket in less than 20 seconds, replace it with a high-efficiency showerhead. Drop by the Conservation office and pick up a free high quality, high-efficiency showerhead today.

Water Conservation Tip

Indoor

By replacing your older top-loading clothes washer with a new high-efficiency model, you can save a significant amount of water and energy. High-efficiency washers use 50 percent less water and energy than conventional washers, and they are kinder to your clothes. CCWD and PG&E currently have High Efficiency Clothes Washer Rebate Programs.

Water Conservation Tip

Sometimes when people want to get a glass of water they will run the water in the sink to make sure the water is cold.

Instead, keep a glass container of water in the fridge for drinking. This will eliminate the need to run the water each time.

Water Conservation Tip

Run your clothes washer and dishwasher with full loads. This will maximize the water and energy efficiency of the appliances.

Water Conservation Tip

We all know that you shouldn't run the water in the sink when brushing your teeth. Another water saving tip is to put a plug in the bathroom sink when shaving rather than rinsing your razor under the running faucet.
